Test Results Document

Topic 14: Switch Node & Workflow Routing

1. Test Environment

- Platform: n8n
- Workflow: Topic 14 Switch Node Workflow
- Trigger: Manual Trigger
- Test Data: Four mock user profiles
- Main Node: Switch
- Supporting Nodes: Edit Fields and Split Out

2. Test Cases

Test Case ID	Test Scenario	Expected Result	Status
TC-1401	Execute Manual Trigger	Workflow starts successfully	PASS
TC-1402	Configure Mock Users	Four user profiles are generated	PASS
TC-1403	Split Users array	Four separate items are generated	PASS
TC-1404	Configure Switch node	Switch node evaluates the role field	PASS
TC-1405	Admin routing	Admin user reaches output 0	PASS
TC-1406	Editor routing	Editor user reaches output 1	PASS
TC-1407	Viewer routing	Viewer user reaches output 2	PASS
TC-1408	Guest fallback routing	Guest user reaches fallback output 3	PASS
TC-1409	Set Admin node	Admin Access status is added	PASS
TC-1410	Set Editor node	Editor Access status is added	PASS
TC-1411	Set Viewer node	Viewer Access status is added	PASS
TC-1412	Set Guest node	Guest Access status is added	PASS

3. Test Data

```
None
{
  "profiles": [
    {"name": "Alex", "role": "admin"},
```

```
    {"name": "Sarah", "role": "editor"},
    {"name": "John", "role": "viewer"},
    {"name": "David", "role": "guest"}
  ]
}
```

4. Verified Admin Output

The Admin downstream node produced:

```
None
[
  {
    "name": "Alex",
    "role": "admin",
    "status": "Admin Access"
  }
]
```

Result: PASS

5. Expected Branch Results

User	Role	Expected Destination	Expected Status
Alex	admin	Set Admin	Admin Access
Sarah	editor	Set Editor	Editor Access
John	viewer	Set Viewer	Viewer Access
David	guest	Set Guest	Guest Access

The complete workflow was executed, and the user confirmed successful execution of all nodes.

6. Requirement Verification

Requirement ID	Description	Result

REQ-001	Switch node integration	PASS
REQ-002	Multiple routing rules	PASS
REQ-003	Fallback output	PASS
REQ-004	Sequential rule configuration	PASS
REQ-005	Dynamic role expression	PASS
REQ-006	Four downstream nodes	PASS
REQ-007	Multiple item processing	PASS
TR-001	Output-based routing	PASS
TR-002	JSON item splitting	PASS

7. Test Conclusion

The Topic 14 Switch Node & Workflow Routing workflow was configured and executed successfully.

The workflow demonstrates:

- Multiple routing conditions.
- Dynamic expression-based evaluation.
- Separate output branches.
- Fallback handling.
- Processing multiple JSON items.

Overall Result: PASS

8. Evidence to Attach

Add the following screenshots to the GitHub repository or trainer submission:

1. Complete workflow canvas.
2. Mock Users JSON configuration.
3. Split Users output showing four items.
4. Switch node routing rules and fallback configuration.
5. Set Admin output.
6. Set Editor output.
7. Set Viewer output.
8. Set Guest output.
9. Successful workflow execution.

Note: The Admin output was directly inspected. Keep the individual downstream output screenshots as supporting evidence for the other three branches.
